BlendSave

Masterbatch Accuracy of 0.01 g' / Batch

BlendSave is the world's first multi-channel masterbatch blender. Factories can now produce all colors in any sized batch, while significantly reducing inventory costs.

Freedom to Produce

BlendSave prepares over 10,000 colors from a combination of up to 14 base compounds and virgins. Now your factory can create any desired color!

Accurate, Simultaneous Weighing

The pellets are weighed simultaneously with near absolute accuracy in their individual bins, enhancing production speed and eliminating the risk of error and contamination. The color pellets are then dropped through a funnel, in their appropriate ratio.

Reduce inventory

Save money by storing only the base colors required, and create virtually unlimited colors with a database of recipes. With **BlendSave**, your factory will never be short of any rare shade, or low volume mixture.

Program Monitoring

Have access to continuously updated job status, machine data and historical graphs with LIAD's interactive PC dashboard.

BlendSave can create virtually any masterbatch color from a base of 14 compounds and virgins.

BlendSave

BlendSave will lower your masterbatch inventory costs.
